PROFESSIONAL SUMMARY

Computer Science graduate with a strong foundation in Java, Spring Boot, and DSA. Most of that foundation comes from building real projects — a distributed order-fulfillment system using Kafka and the Saga pattern, and a couple of full-stack apps with REST APIs and JWT-based authentication.

EDUCATION

Jamia Hamdard, New Delhi

May 2026

B.Tech in Computer Science Engineering — CGPA: 7.5/10

COURSEWORK

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Compiler Design

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript

Backend: Spring Boot, Spring MVC, Spring Security, JPA/Hibernate, RESTful API Design, JWT

Frontend & Full-Stack: React.js, HTML5, CSS3, Node.js, Express.js

Databases & Caching: MySQL, PostgreSQL, Redis

DevOps & Tools: Docker, Git, GitHub, Maven, Postman, CI/CD

CS Fundamentals: DSA, OOP, DBMS, OS, Compiler Design

PROJECTS

Saga Fulfillment Engine – Order System | *Java, Spring Boot, Kafka*

August 2026

[Source Code](#)

- Built a distributed order-fulfillment system across 6 microservices, using the Saga pattern to coordinate multi-step transactions and automatically roll back on failure.
- Added a Redis-backed distributed lock and a Quartz scheduler to recover stuck transactions, plus idempotent message handling to prevent duplicate charges under Kafka's at-least-once delivery.
- Validated the system with a 154-test suite (unit and real end-to-end tests via Testcontainers), catching 3 real bugs before deployment.

SQLStudio – AI-Powered SQL IDE | *React, TypeScript, Node.js*

June 2026 – July 2026

[Source Code](#)

- Built a React/TypeScript SQL IDE with Monaco Editor and a Fastify backend for AI-powered RAG SQL generation, hitting 50–100ms median API response time.

Task Flow – Project Management Platform | *React.js, Node.js, PostgreSQL*

May 2026 – July 2026

[Source Code](#) | [Live](#)

- Built a project management platform end-to-end – 20 REST API endpoints secured with JWT and Google/GitHub OAuth 2.0, role-based access control, and a live AI analytics dashboard (98 Lighthouse performance score).
